

## Program Description

The Bachelor of Science in Animal Science equips students with a holistic understanding of animal biology, nutrition, health, and management. Covering topics like genetics, physiology, and livestock care, the program emphasizes hands-on experience. In Malawi, where the livestock industry's contribution to GDP is low at 12%, trained professionals are crucial to meet increasing demand. The program aligns with national goals of economic growth and regional agendas for scientific advancement. By addressing challenges like low productivity and climate change, graduates play vital roles in improving livestock production and ensuring food security. With a focus on practical skills and research, they become essential contributors to Malawi's agricultural development and global sustainability efforts.
